

# SENIOR SOFTWARE ENGINEER

July 15, 2025

## Caribou

Dear Caribou,

**TL;DR** I'm a broadly talented engineer more than capable with Node and Rails, am excited about this position, and am also absolutely a real human being directly typing these symbols into my computer for you to read, dear hiring manager.

Working across the stack is my normal modus operandi - no stretch there. I'm competent with React, proficient with Node and Rails, and have given talks on Test-Driven Development, and why there are so much contradictory advice.

The fight against software complexity is a core motivation for me - at Groupon, I spent one hack week removing several thousand lines of dead code from the main Rails app.

Sincerely,

Jason Felice
